

Connection Dialog

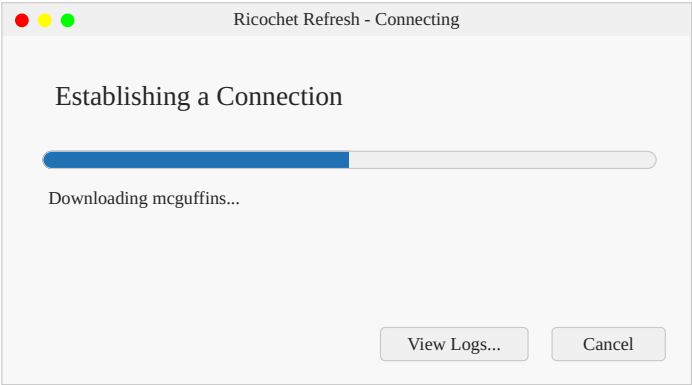

This is the first window that will appear if Ricochet Refresh is managing its own Tor provider (versus using a system-owned Tor or Arti instance). If we are using an external Tor provider, we will go directly to the Main window.

TODO: This UI implies a single Tor provider for potentially multiple Ricochet Refresh profiles. Does it make sense for them to all have the same guard?

Configure opens the Preferences dialog Connect begins bootstrapping tor

We will try to follow a desktop'ified version of Tor Browser's [about:torconnect](#) page here

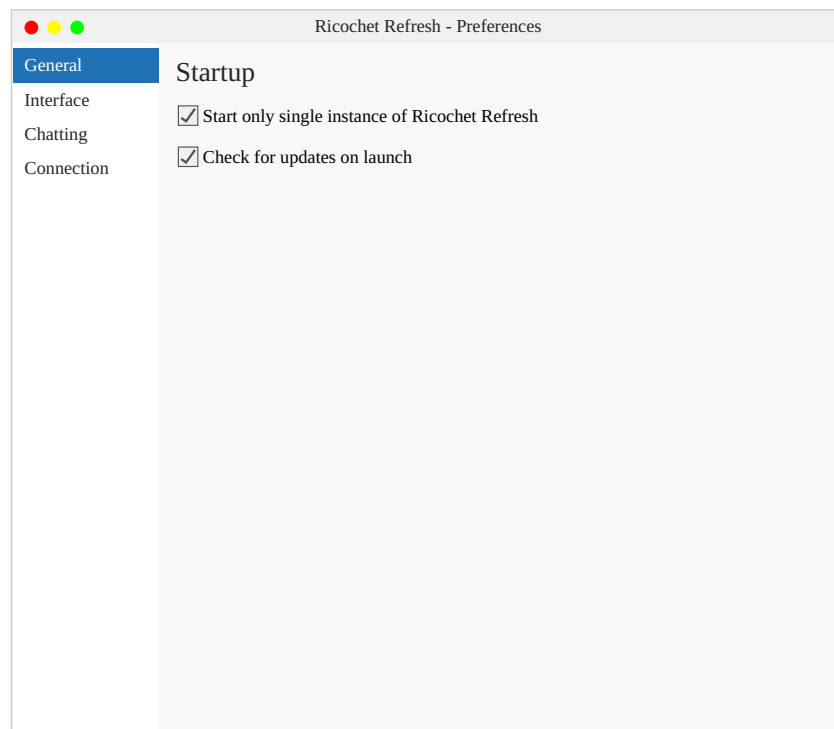

Open the Tor Logs dialog Cancel current bootstrap attempt

Preferences (General) Dialog

The General section of the Preferences dialog. Should enable configuring general application behaviour that are not specific to the other sections.

TODO: Ensure these ALL options are safe to store unencrypted, since they are the app-wide settings and so won't be stored in a profile

Preferences (Interface) Dialog

The Interface section provides users with UI customisation options

TODO:

Enabled/Disabled icons
in the Main taskbar?

The screenshot shows a window titled "Ricochet Refresh - Preferences". On the left is a sidebar with four items: "General", "Interface" (which is highlighted with a blue background), "Chatting", and "Connection". The main area of the window is divided into sections. The "Language" section has a label "Select interface language:" followed by a dropdown menu showing "English (en-US)". The "Toolbars" section has a label "Button style:" followed by a dropdown menu showing "Icon only". The "Alerts" section contains three checkboxes, all of which are checked: "Show desktop notifications", "Blink taskbar icon", and "Enable audio notifications". The "Tray Icon" section contains two checkboxes, both of which are checked: "Minimize to system tray" and "Close to system tray".

Languages sorted by language
code

- Icon only
- Text only
- Text beside icon

NOTE: probably platform-
specific

Preferences (Chatting) Dialog

The Chatting section provides users with conversation-related options.

TODO: Chat
formatting/density

TODO: Timestamp
formatting/localisation

Ricochet Refresh - Preferences

General

Interface

Chatting

Connection

Logging

☒ Enable conversation logging

☒ Display conversation scrollbar

Scrollbar lines:

1000

Logs are stored in the encrypted profile file

Timestamps should be stored in un-localised format

Preferences (Connection) Dialog

The Connection section provides users with Tor Provider related options. This page may vary a lot depending on which Tor Provider is selected. For instance, a System Tor Daemon Tor Provider (eg on Tails) would have this section almost entirely empty. For now let's have this mostly mirror about:preferences#connection in Tor Browser.

TODO: Bridge Card support

TODO: Maybe Backend should be the *first* configurable item in the list?

General

Interface

Chatting

Connection

Quickstart

Bridges

Network Settings

Advanced

Quickstart connects Ricochet Refresh to the Tor Network automatically when launched, based on your last used connection settings

☒ Always connect automatically

Bridges help you securely access the Tor Network in places where Tor is blocked. Depending on where you are, one bridge may work better than another.

☒ Use Bridges

Add bridges

☒ Chose from one of Ricochet Refresh's built-in bridges

☒ obfs4

Makes your Tor traffic look like random data. May not work in heavily censored regions.

☐ Snowflake

Routes your connection through Snowflake proxies to make it look like you're placing a video call, for example.

☐ meek-azure

Makes it look like you're connected to a Microsoft website, instead of using Tor. May work in heavily censored regions, but is usually very slow.

☐ Enter bridge addresses you already know

Paste your bridge addresses here

Network Settings

☐ I use a proxy to connect to the internet

Proxy Type

SOCKS5

Address

IP address or hostname

Port

Username

Optional

Password

Optional

☐ This computer goes through a firewall that only allows connections to certain ports

Allowed Ports

80,443

Advanced

View the Tor logs

View Logs...

Backend

Select which Tor client implementation to use. Changing requires an application restart.

☒ Out-of-Process Tor daemon (default)

☐ System Tor daemon

☐ In-Process Arti

Add bridges region collapses if Use bridges is not ticked

Tor Logs Dialog

Provide logs from the underlying Tor Provider. This dialog should match layout of Tor Browser's `about:preferences#connection` Tor Logs dialog. Some Tor Providers will not have logs to display (eg System Tor Daemon)

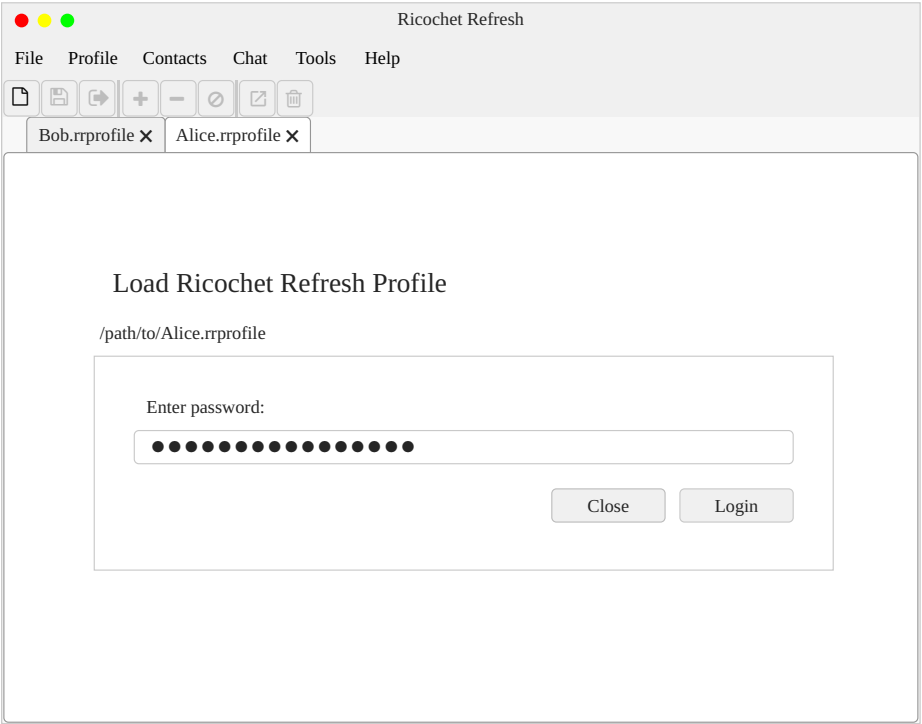

Main Window

Users reach this window after bootstrapping via the Connection dialog, or directly if the Tor Provider does not require explicit bootstrapping (eg System Tor Daemon). A password is required to decrypt a Ricochet Refresh profile. Obviously we draw a lot of inspiration here from KeyPassXC and friends.

TODO: New profile flow

TODO: Open Profile toolbar button?

Users will always 'login' into the 'offline' state, they will opt-in to less private visibility states

Main Window (Online)

Profile tab when the user is logged in. In 'Online' mode identity and endpoint servers are enabled, anyone can cyberstalk the user if they know the user's Identity Server Service ID

Menus

File:	Profile:	Contacts:	Chat:	Tools:	Help:	
- New Profile	- Set Visibility >	- Add Contact...	- Export Logs...	- Downloads...	- Manual	- Licenses menu option should open a folder containing relevant licenses
- Open Profile...	- Online	- Delete Contact	- Delete Logs...	- Tor logs...	- Licenses...	
- Close Profile	- Restricted	- Connect/Disconnect Contact		- Preferences...	---	- Changelog menu option opens CHANGELOG.txt in system default text editor
- Save Profile As...	- Hidden				- Check for Updates...	
---	- Copy Ricochet Id	- Ban/Unban Contact			- Changelog...	
- Logout	- Edit Profile...				- About	
- Logout All Profiles						

- Quit						

Toolbar Icons

New Profile, Save Profile As, Logout | Add Contact, Delete Contact, Ban Contact, Connect/Disconnect Contact | Export Logs, Delete Logs

- Hide a conversation by clicking on a user entry again to unselect

- Per-contact context menu will have all the per-contact commands from the Contacts menu

User groups:

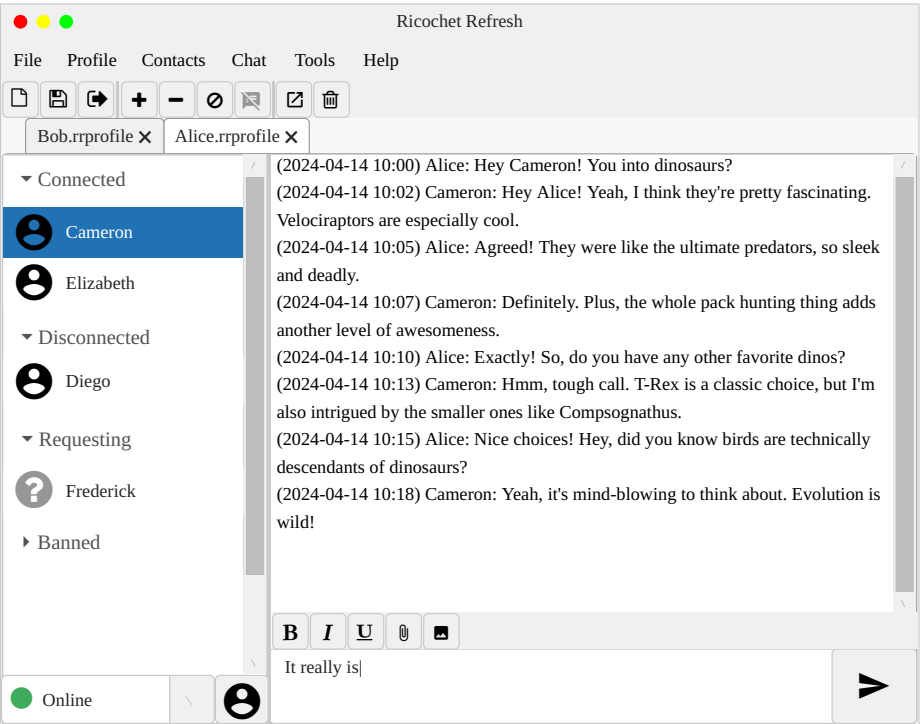

- Connected: users which have connected to our, or which we have connected to their endpoint server

- Connecting: users which we are explicitly attempting to connect to (Hidden mode only)

- Disconnected: no active connection; 'offline' to us

- Requesting: in-progress outgoing friend requests

- Banned: no endpoint server, actively blocking attempts when accessing our identity server

- URLs will never open a browser, only open a context menu with the option to copy the URL to clipboard

- exported conversations should be standardised to avoid leaking user's locale re timestamps, any potential formatting options, etc

- user status (connect/disconnect) messages will appear in chat

TODO: Chat Thumbnail and Image UI; images should have be optionally spoiler'd and have text descriptions

TODO: Chat Attachment UI

TODO: Incoming Friend Request flow

TODO: Downloads dialog

TODO: About dialog

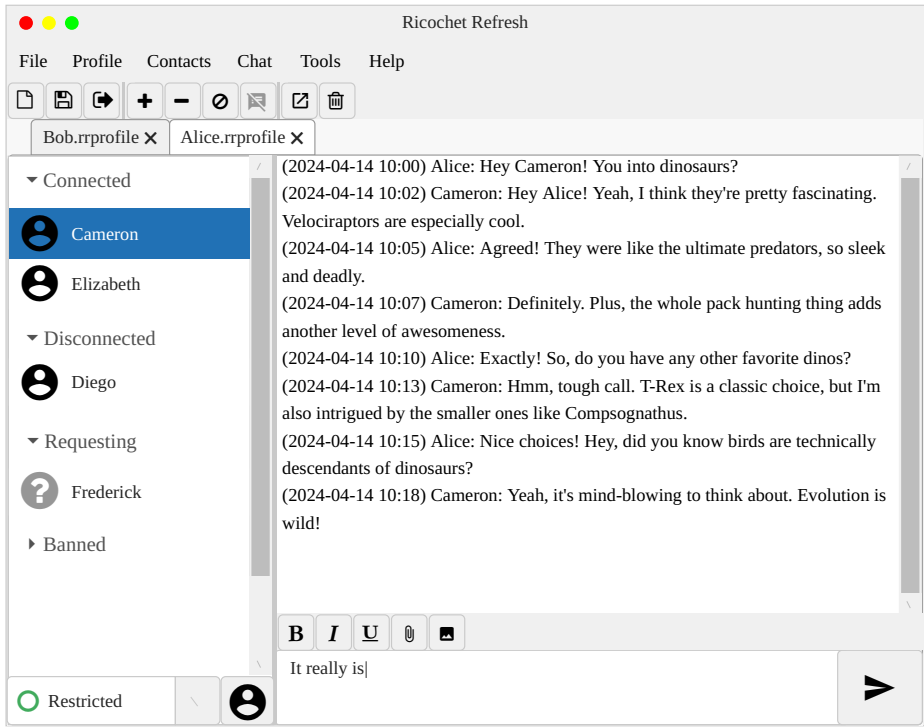

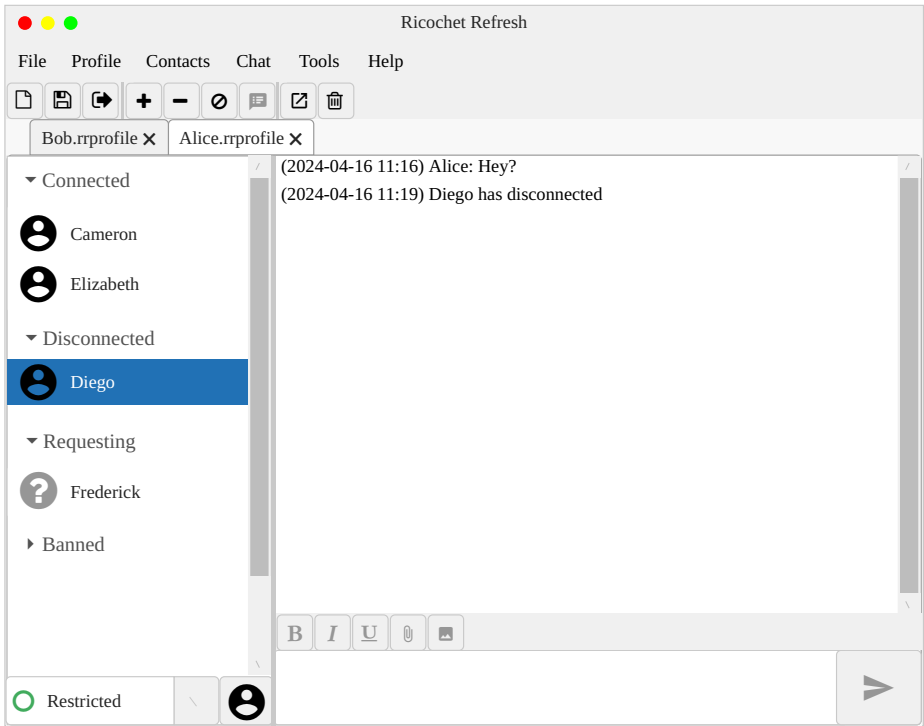

TODO: Edit Profile dialog

Visibility Modes:	Profile button:
- Online: identity and endpoint servers are enabled	Open an Edit Profile dialog where user can:
- Restricted: endpoint servers are enabled	- get Ricochet id
- Hidden: no endpoints enabled, but outgoing connections can occur	- set display name
	- set profile image
	- set profile info
	- w/e else metadata users opt into
- Offline: no endpoints enabled, no outgoing connections either	
NOTE: Online should really communicate 'most risk', users can be cyberstalked if they always stay in Online mode	

Minor text formatting:
- Bold
- Italic
- Underline
Add Attachment
Inline-image
NOTE:
- Attachments are sent as-is, but are not rendered/previewed by the application.
- Inline-images will be somehow re-encoded to hopefully avoid malformed image decoder bugs/exploits

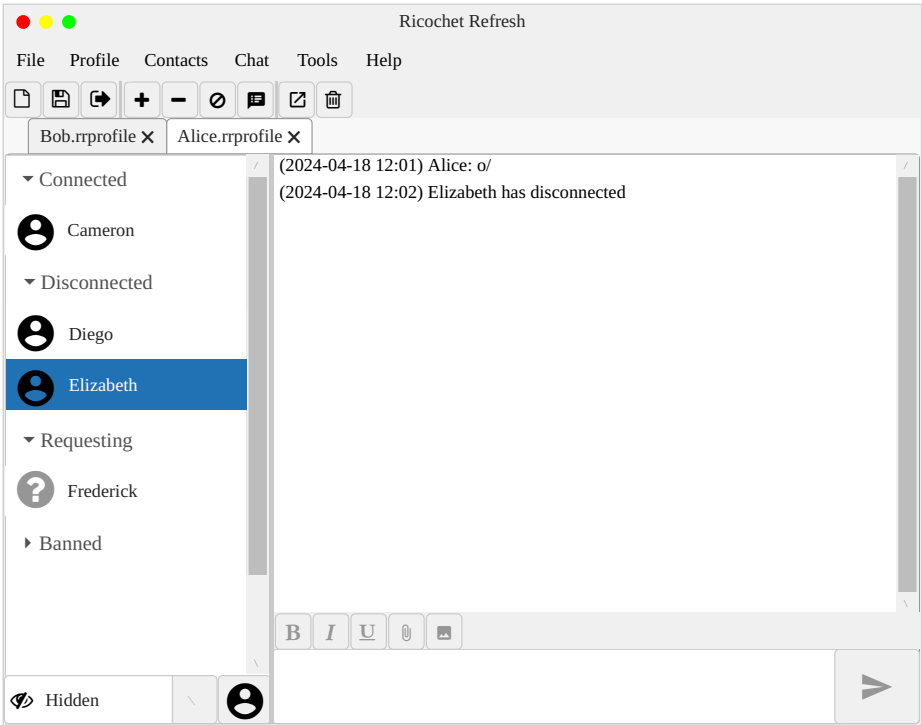

Main Window (Restricted)

In 'Restricted' mode (identity server disabled, endpoint servers enabled) only confirmed/allowed contacts may contact us. New contacts will not be able to access the public identity server to get through the gosling handshake to get their own endpoint server. This way strangers will not be able to cyber-stalk a user based off of their (potentially) public identity server. The UX should be identical to Online mode, except the user will never receive new friend requests.

Main Window (Hidden)

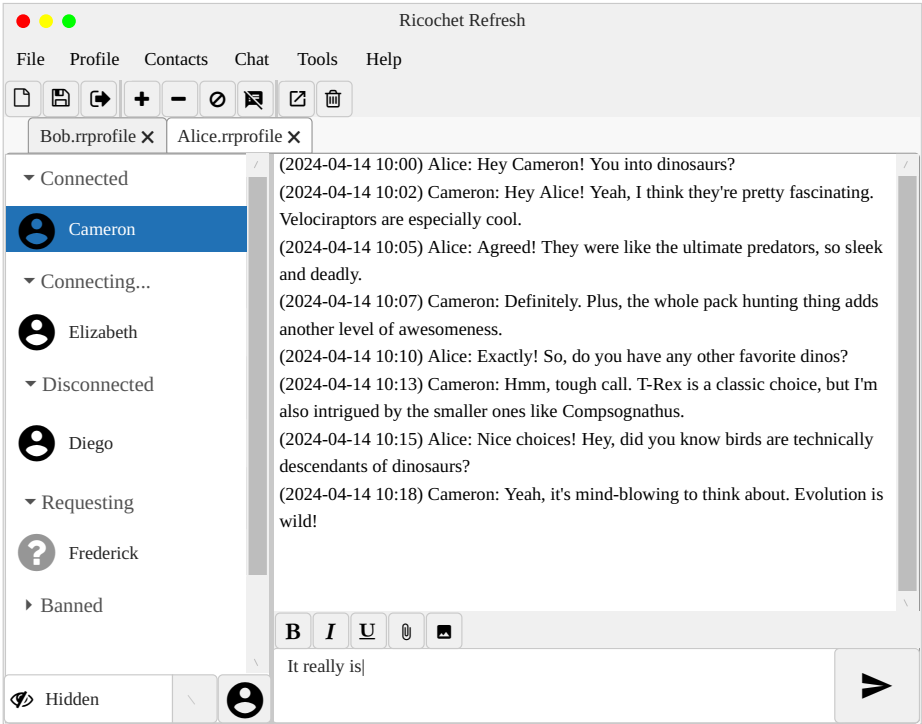

In 'Hidden' mode we do not enable any of our endpoint servers or identity servers, so even contacts do not gain our online/offline metadata. Connections are outgoing only and must be explicitly initiated by the user. This does imply that two users which are both in 'Hidden' mode will not be able to ever connect to each other!

- Chat input widgets are disabled if the user is not connected

- User must opt-in to connecting to contacts when in Hidden mode using the chat icon in the toolbar or connect action in the contacts menu

- Contact goes into Connecting... group when connect is initiated
- Once a user reaches Connected, then chat can happen

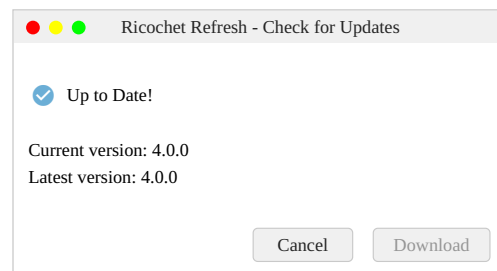

Check for Updates Dialog

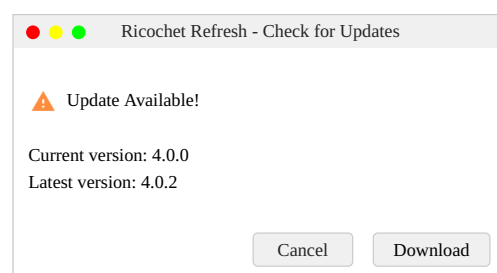

Accessed via the Help > Check for Updates... menu item. This will open a dialog which pings an onion service for update jsons, which will tell this dialog which install media/package to download.

- Check happens over Tor to Onion Service endpoint
- Will need some to maintain some update jsons

- Ricochet Refresh s up to date so we good

- Download the correct package based on the current insalled version (eg a deb, appimage, dmg, windows installer, etc
- Download button will open Downloads dialog
